

South Western Tapes

Delivering tape technology since 1977

Experience and technical expertise

Precision die cut pieces speed assembly and provide a more aesthetic finish to a product.

With a tradition in the tape industry extending to more than a quarter of a century, South Western Tapes has evolved into a leading authority within the sector.

Technical advances in the development of specialised tapes and adhesives have created an ever expanding range of industrial and business solutions. South Western Tapes prides itself on staying at the forefront of this technology and delivering exceptional levels of service to customers throughout the UK.

It's the combination of extensive industry experience, technical product knowledge and the desire to build long-term business relationships that makes the difference for our customers and sets us apart.

Working with our customers

Flexible stock holding and speed of delivery from a supplier have become an essential requirement of a modern manufacturing company.

The vast majority of our customers have been with us for many years. Some for more than a decade which is rare in business today.

The principal reason they stay with us is that we take the trouble to understand their business and their business needs. We deliver solutions accordingly.

At South Western Tapes, we actually enjoy working with our customers and not simply for them. The business benefits of such a working relationship are tangible. With literally thousands of tape and adhesive application properties and product combinations, we regard it as imperative to deliver the right solution for each individual requirement. Therefore, the more we know about our customers and their needs, the better the products we're able to provide and the better the service we deliver.

Solutions for every industry
